

MAD® FSX INTELLIGENT TENT LAMP

Another cool MAD® idea! At first glance this looks like an ordinary-tent light, but it actually is a bivvy lamp and bite alarm receiver in one! Next to a set of six ultra-bright long-life LEDs, there is an adjustable multicolor LED placed in the center. When using our MAD® FSX alarms, the 6 LEDs switch on automatically when- ever the alarm is activated by a running fish! This is not all... the multi-color LED in the middle also lights up and corresponds with the color of the bite alarm that has just been activated. This way, your tent is illuminated when you have to go out and fight the fish. This saves you time when searching for your shoes and opening the tent. On top of that, the light is also indicating which one of the rods is having a fish on. To increase the battery lifetime, the light switches off automatically. The brightness of the LEDs, as well as the time that the light is on after a bite, can be set on the unit. The lamp operates on three 1,5 Volt AA batteries (not included).
