

MAD® X-TRA TUFF CARP LINE

A new development from MAD®. Our target was to design a solid and abrasion resistant line, which is still supple enough to follow the contours of the lakebed properly. Modern reels like the Quick® SLS or the Quick® ZBase got an ideal line lay and we think a modern line should adapt to this as well. Like a sports car needs its own and special oil, those reels need a line that supports their features. We made the most out of it when it comes to abrasion resistance, low stretch and low memory effect but still were able to achieve a level of suppleness, so they line lay won't be impaired.

MAD® D-FENDER TITANIUM

After many successful years it was about time to give our D-Fender line a facelift. We decided to give the line a new green colour, which in average conceals best underwater, as the most waters got a shade of green. Our titanium green is slightly translucent as well and therefore assimilates to light conditions. We are convinced it's hard to find a line with better concealing properties. The line also features a sealing of the newest generation, which makes it even more resistible. Of course we kept all the other important features like the low memory effect and the reduced stretch, resulting in a direct bite indication and further casts, as the rod can be charged much better.
