

DAM PTS TROTTA LAGO FLOAT

A high quality inline float that has been especially designed for slow retrieve fishing for trout. Thanks to its pear-shape it moves stable through the water, no matter if there is wind or little waves.

DAM PTS GENIALI POSE

These clever floats are a bit more sophisticated than the conventional peacock floats. The balsa wood is much stronger, which prevents the float from bending in the middle. Thanks to the silicon fixation system on both ends of the float, the float can be connected to the line in a way which avoids tangling while casting. This happens a lot with the old peacock floats. The coloured ends also have a very clever function: it enables you to change antenna colour fast and easy without changing the entire system!

The biggest advantage of these slim trolling floats is that they have nearly zero resistance in the water. It cuts effortlessly through the surface whereby each tiny deviation often indicates a strike. These floats are ideal for fishing with trout paste, but also very well suitable for tremarella.
