

## DAM INLINE CARP LEAD

Sensational carp lead that allows a quick change of weight!

- Cut the included anti-tangle tube to the required length and insert it approximately 1 cm deep into the flexible head tube in order to achieve a strong connection.
- Now insert the line from the back of the tube and finish your rig. Then select your required style and weight of lead, insert the line into the gap of the lead and move it forward over the anti-tangle tube in direction of the head tube.
- Fix the lead by just pushing / pulling it forward over the enlarged part of the head tube until it can't be moved in any deeper. That's all!
